

LOW TEMPERATURE GARMENTS

THERMO trousers

MC5311

MATERIALS

High-frequency bonded fabric, seamless, 100% polyester.

FEATURES

Designed to offer maximum protection against the cold, these pants are made from high-frequency bonded fabric, a technology that allows for seamless construction, reducing points of heat loss and increasing wear resistance. They ensure high resistance to heat dispersion, contributing to cold protection down to temperatures of -5°. The elasticated waistband with drawstring ensures an adjustable and secure fit, comfortably adapting to the wearer's body shape. The 3 pockets make them functional and practical, allowing essential tools and items to always be within reach during work. Windproof Softshell inserts further enhance thermal protection, blocking the entry of cold air into the most exposed areas.
