

ALUMINIZED GARMENTS

Proximity coat**MC6416****MATERIALS**

Aluminized para-aramid fiber

GRAMMAGE

460 g/m²

FEATURES

Proximity coat, made from aluminized para-aramid fiber, inherently flame-retardant, designed to ensure maximum safety for those working in high-risk environments where exposure to multiple hazards is constant. It offers integrated protection against flames, convective, radiant, and contact heat, as well as small splashes of molten metal. The garment is designed to ensure protection and practicality in specialized operations. The design features a mandarin collar, free of points or protruding flaps, which effectively protects the cervical area from heat, splashes, and external agents, while simultaneously reducing the risk of entanglement with machinery or equipment. The rear Velcro closure ensures quick and secure donning, allowing the coat to adapt to the wearer's body shape and reducing heat entry points. The 120 cm length offers extended coverage, better protecting the body and ensuring overlap with other protective equipment, for more effective thermal insulation and increased safety in approach operations. Made with durable materials and meticulous finishes, this coat is designed to offer freedom of movement and reliability in the most demanding operating conditions.

DETAILS

- Mandarin collar, effectively protects the cervical area from potentially harmful external agents;
- Rear velcro closure, for quick and secure donning;
- 120 cm length, for more extended coverage and increased protection.
