

ALUMINIZED GARMENTS

Proximity gaiters

MC6418

MATERIALS

Aluminized para-aramid fiber

GRAMMAGE

460 g/m²

FEATURES

Proximity gaiters, made from aluminized para-aramid fiber, inherently flame-retardant, designed to ensure maximum safety for those working in high-risk environments where exposure to multiple hazards is constant. They offer integrated protection from flames, convective, radiant, and contact heat, as well as from small splashes of molten metal. The garment is designed to ensure protection and practicality in specialized operations. Intended to be worn over personal footwear. The rear velcro closure ensures quick and secure donning, keeping the gaiter snug and reducing the risk of openings that could compromise protection. The 38 cm length ensures protection even on part of the leg, increasing operator safety. The design is engineered to ensure comfort, stability, and durability, making the garment ideal for operations in extreme environments where safety is a priority.

MAINTENANCE

Please follow the recommended washing instructions.

QUANTITY PER CARTON

1

CATEGORY

III -> This product is currently planned and produced to comply with Regulation (EU) 2016/425 and subsequent modifications.

DETAILS

- Height 38 cm, for further calf coverage.

CLOSING

Rear closure with Velcro.
